

Audit Your Enterprise Storage

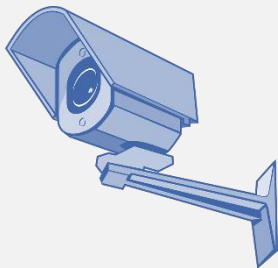

DefendX Control: File Auditor

Protect Your Digital Assets

Your stored unstructured file data is growing by volumes every day. With each new user and file, this data is constantly updating and expanding. Industry experts cite that file data can grow by up to 80% a year. And as your file data in primary storage grows, it can become difficult to manage. It's even harder to track without file auditing software. You still need to maintain a clear accountability path of all data file changes in order to comply with regulatory compliance mandates. Can you trace how and when your critical files are accessed? Are your chain-of-custody logs ready in the event of a security threat or compliance check? Could you pass an audit with your current system right now?

Proven Enterprise Solution Includes:

Detect sudden shifts in user behavior

Be alerted to unwarranted data access

Reduce the risk of malicious asset destruction

Our Solution Defends You

We provide you with an immediate view of who is accessing which documents across your entire storage environment. The view is in real time. This file auditing software gives you automatic reporting and auditing tools. These tools help you build an extra layer of security around your company's sensitive file data and intellectual property.
