

# Control Storage Growth

DefendX Control: QFS

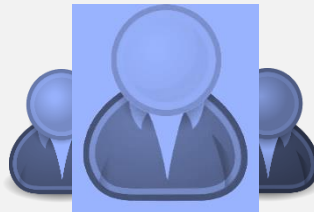

## Command Your Environment

In the early days of unstructured file data management, it became clear that users who were given unlimited storage space would save everything - even personal files that had no business relevance. To solve this challenge, disk quotas were incorporated to manage the explosive growth of data storage files. But are your file data management challenges really solved?

### Proven Enterprise Solution Includes:

Multi-platform, enterprise-wide data management

Engage end users to comply with data use policies

Control storage environment through a single interface

## Unique Help for Your Unique Needs

Unlike alternative software solutions, the QFS file data management system lets you customize your policies to meet the specific needs of your individual users. Just as your accounting and marketing departments have different responsibilities, they also have different storage requirements. QFS lets you preset and configure your file blocking and quota policies to meet their unique needs at both the share and directory levels. File management blocking is done automatically to reduce your storage consumption.
